Machine Learning Using Python

Day 6: Assignment

1. Create two array of size (3, 3) and print their sum and multiplication.
2. Create an array of size (3, 4) and reshape to (4, 3).
3. Create an array for a given range of elements between 2 to 40 step by 3.
4. Create an evenly spaced numpy array of 10 values between 5 to 35
5. Create an array of size 10 and calculate square root and standard deviation.
